To who it may concern

In the season of 2003 we started using Turf Revolution Organic Lawn fertilizers on our sport fields. Our current soccer fields were being utilized so heavily that the turf was being pulverized. The first season we applied Alfalfa 5-1-5 in the spring and in the fall. The second season we applied Alfalfa 5-1-5 and Easy Flo Compost in the spring. In the fall the Alfalfa 5-1-5 was applied again. Also we over seeded and did spring and fall aeration. At the end of the second year I noticed that the turf was starting to regenerate do to these efforts. All the areas are non-irrigated. In the past years the fields had not been fertilized. The 2005 season was one of the driest years it has been in Southern Ontario. When the fall rains started again, the turf in the soccer fields showed a stark difference than the ball fields which did not receive the treatment and had never looked better. We are continuing to use this product for the third season. Moving to organic fertilizers has assisted the municipality in meeting its goals to reduce pesticide use and creating a healthier environment. I would recommend this product for the future of lawn care.
